

Justin Mcleod

Web Developer | New York, NY | github.com/justin | justin@email.com | 555-555-5555

Work Experience **Dropbox** Web Developer 2018 - Current

- Migrated CoffeeScript React components to TypeScript and added full test coverage.
- Improved web file preview load times by 15% by removing third-party libraries.
- Contributed to the React server rendering project to improve initial page loads for users on high latency internet connections.

Facebook Software Engineer, React 2013 - 2018

- Part of the React core team responsible for maintenance of the open source project.
- Designed and implemented the reconciliation algorithm that improved the developer experience while also offering performant rendering.
- Added support for CSS in JS, allowing components to be styled without CSS files.
- Core contributor to the release of React hooks, which aided the transition to functional components.

Parse Front End Developer 2011 - 2013

- Parse was acquired by Facebook in 2013.
- First engineering hire. Responsible for setting up bundling, testing, asset management, UI components, and much more.

Projects **Refined GitHub** 2015 - Current

- Created a browser extension to improve the experience of the GitHub website.
- The repository has 231 contributors and over 13,000 stars.

React

- Contributed to the effort to standardize mouse/touch event handling.

Education **MIT** BS Computer Science 2009 - 2013

Research assistant at the MIT Media Lab.
